ABOUT US

Founded in 1955, Sterimed Group today has presence in the fields of Medical and Surgical Devices, Industrial and Medical Adhesive Tapes, Eco-friendly non-woven bags among others. At Sterimed Group we take pride in delivering quality consistently for over 65 years, and growing on the trust and goodwill of our customers. Focusing on the future, we are expanding rapidly into newer products and geographies, and are slated to be amongst the fastest growing homegrown companies in the country.

Sterimed has been a significant player in medical disposables and devices, offering a range of over 100 products, and catering to the needs of the medical fraternity for over 65 years.

OUR VISION IS TO INNOVATE FOR TOMORROW AND IMPROVE PATIENT CARE, WITH A SHARP FOCUS ON QUALITY AND EXCELLENCE, AND ON DELIVERING WORLD-CLASS PRODUCTS.

QUALITY ASSURANCE

At Sterimed, Quality Assurance is at the heart of how we do things. Our comprehensive Quality Management System ensures exhaustive checks and testing at all stages in the production cycle, right from raw material procurement till packing of the finished products. And our state-of-the-art manufacturing facilities at Bahadurgarh near New Delhi meet the strictest international compliances and requirements.

Our rigorous quality control standards have earned us the WHO GMO certification, CE Marking as per European Medical Device Directive 93/47/EEC, EN ISO 13485:2016 certifications.

STRICT HYGIENE AND SAFEGUARDS

At Sterimed, we have set stringent hygiene and environment friendly standards. Walls and flooring at all facilities are epoxy coated to minimize bio load, and Special HEPA /micro filters are provided at all air handling equipment to minimize contamination in the manufacturing areas.

RESEARCH AND DEVELOPMENT

In line with our vision of Innovating for Tomorrow, there is immense focus internally on Research and Development. A modern laboratory equipped with pilot plant facilities works constantly on improving existing products and developing new innovative products for the portfolio.

GLOBAL PRESENCE

Sterimed Group's vision spans across geographies, catering to domestic as well as international markets. With operations across Latin America, Africa and South-East Asia, the group is fast expanding its footprint globally.

Cateter balão High Flow

Cathéter à ballon High Flow

- Used for short term urine drainage
- Made from natural latex rubber
- Silicon elastomer coated smooth surface for atraumatic catheterization
- High strength polymer layer in the middle of the catheter ensures wider inner diameter and hence high flow rate
- Minimises encrustation and subsequent catheter blockage and failure
- Smooth eye, ultra thin highly elastic balloon and hard non-return valve for trouble free inflation and deflation

High Flow Features:

LAYER 1

Non adherent silicon elastomer

LAYER 2

High strength polymer

LAYER 3

Low protein latex with antioxidants

LAYER 4

Protective silicon elastomer

Unique Four Layer System

Prevents allergy from proteins in the Latex

A Study was conducted by a research team of **DOW CORNING, USA** to check the efficacy of the elastomer coating on the **STERIMED HIGH FLOW FOLEY BALLOON CATHETER**, which were compared to an uncoated catheter.

The results indicated a 54% fall in coefficient of friction. Meaning, the possibility of tissue damage and trauma is reduced to half. Further, the study checked the longevity of the coating under exposure to urine for upto 29 days.

The results indicated that the coating remained fully functional during the period of study. Further, the study clearly indicates an increase in coefficient of friction due to encrustation over a longer period, in case of an uncoated catheter.

However, in case of elastomer coated catheter, the coefficient of friction remains consistently low over the 29 days of study thus ensuring a smooth trauma free removal of the catheter.

Comparison of flow rates of **STERIMED HIGH FLOW FOLEY BALLOON CATHETER** VS Some leading brands in the market.

- Used to maintain a patient airway and mechanically ventilate patients
- Made from a special non-toxic PVC coated with silicon elastomer which forms a bonded film over this tube and balloon.
- 100% Phthalate free.
- The tube is coated with non-stick, self-lubricating Silicon elastomer (Elastosyl) which forms a thin film on the surface.
- Elastosyl reduces the coefficient of friction by 80%, Reducing trauma significantly.
- Elastosyl coating forms a non-stick layer on the balloon preventing it from sticking to the trachea.
- Elastosyl offers a 100 % more bio-compatible surface to the tube and is much safer for the body.
- Low pressure high volume cuff provides excellent seal

A Study was conducted by a research team of **DOW CORNING, USA** to check the effects and efficacy of Silicon Elastomer Coating on **STERIMED PVC NASOGASTRIC TUBES**.

The results indicated an astounding fall of almost 83% in the coefficient of friction which clearly indicates that elastomer coated nasogastric tubes will cause much less trauma and tissue damage while intubation.

A further study was conducted to check the behavior of elastomer coating in acidic conditions similar to those in the alimentary canal.

Results showed that over a period of time, the coefficient of friction increased in case of uncoated tubes whereas the coated tubes maintained a consistently low coefficient of friction over 30 days.

The efficacy and inertness of the product remained intact over the 30 days trial. The effectiveness of the coating not only reduces tissue damage during intubation but also reduces damage and trauma during removal.
